

INSTALLING TENSORFLOW/KERAS

- (0) First install Anaconda from:
<https://www.anaconda.com>
- (1) Download the file: "tensorflow.yml" and placed wherever you can find it
- (2) Open a "terminal" window and change you to the folder where the "tensorflow.yml" is located
- (3) Type: "conda env create -v -f tensorflow.yml"
- (4) Type: "conda activate tensorflow"
- (5) Type: "pip install keras"
- (6) Type: "python -b -m ipykernel install --user -name tensorflow --display-name "Python 3.7 (tensorflow)"
- (7) Goto to Anaconda > Open a "Jupyter) (tensorflow" session
- (8) Testing TensorFlow:

In Jupyter type: "import tensorflow as tf"
"print(tf.__version__)"
